Intraction of the property of the libraries representing BIO.5/12.5 pancreatic libraries representing BIO.5/12.5 pancreatic pancreas, and both pancreas, alielets of Langerham were seperately constructions of Langerham were seperately constructions of Langerham were seperately constructions of Langerham and size-selected fractionation. Libraries were amplified once support and plasmid DNA from each library was and mixed in equal amounts. The mixed library normalized by method #4 from Bonaldo, Lennon, 1996 Genome Research 6:791-806; 0.5 microgram single-stranded mixed library plasmid DNA was single-stranded mixed library plasmid DNA was single-stranded mixed library plasmid DNA was inserts and hybridized to an Ecot of 6. Single (unhybridized) plasmids were isolated by hydr chromatography and used to make this library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          dult isler (dev stage="Embryonic day 10.5, E12.5, E16.5, adult, mixed" host="DH10B" (look albe") host="DH10B" (look albe") host="DH10B" (look albe") host="DH10B" (look albe") host and look albe" host albe host albe" host albe hos

and cloned into distinct DraIII sites of the pME188-FL3 vector (5' site CACGTGTGT, 3' site CACCATGTG). XhoI should be used to isolate the cDNA insert. Size selection was performed to exclude fragments <1.5kb. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CTGTGCTGATAAAGCTGGG and 3' end primer CTGTGGTCTAAAAGCTGGG and 3' end
